Denotes Non-native Species:
Cabbage White – Accidentally introduced into Quebec in the 1860s, it has since spread through North America. European Skipper – a Eurasian species that was first documented in North America at London, Ontario in 1910 and has since spread over the northeastern United States.

** These butterflies have not yet been seen at Roaring Brook Nature Center, but can be found in this area. Search for the Harvester near ponds and streams. The Brown Elfin may be discovered in the early spring around blueberry bushes, while the Juniper Hairstreak can be located late-April through July on Eastern Red Cedars. The Variegated Fritillary is a vagrant that occasionally visits Connecticut's northwest corner, where it can be found in mowed fields. Cloudless Sulphur is a southern vagrant occasionally seen on the CT coast in late summer. Seen September 2004, it is rare inland.
